

Installation Instructions

How to install Mini solar panels by correctly?

Installing Mini solar panels are relatively simple, because of its small size, so the installation work efficiency will be relatively high.

The Mini solar panels are usually installed on the some shells of plastics or metals, there's a regular way of installation recommend for you.

#1, At first, be make sure the plane of the installation is flat, and then, put sealing silica gel on the mounting surface to ensure that the four sides and center of the solar panel have sealing silica gel.

#2, Pasting the bottom of the solar panel with 3M double-sided tape, and then, to put it on the plate of the installation.

#3, Keeping the solar panel can not move, if necessary, be using a flat object to press on the solar panels until the the sealed silicone is completely cured.
